

Mission and Aims

We serve to inform the public of the dangers of wireless technology and ways to protect ourselves in our homes, schools, and communities.

1. Increase the number of Americans who are aware of the health impacts of EM radiation to 10,000,000. Historically, when 3% of a population demand change, policies and culture are changed.
2. Spread awareness of harm to health so that we don't see cellphones in movies or advertising being used in harmful ways.
3. Post warning of harmful effects on health at the Point of Sale of cellphones, plans, computers, pads, and other electronic devices.
4. Add 7500+ members to Facebook support group. Use other social media to inform the public: YouTube, LinkedIn.
5. Seek opportunities for interviews on podcasts to educate the public. Become a go-to speaker on EM Radiation health effects.
6. Support collaborative projects with other EMF activists. Develop an effective alliance that increases outreach and broader awareness of harm from EM radiation.
7. Advocate for public health agencies in U.S. cities to conduct a health census in households living within one mile radius of a cell phone tower.
8. Create a national database for EMR adverse events and make its operation widely known.
9. Build a Speakers Forum of EMF activists to be called upon for speaking at companies or to the media.
10. Build registry of health practitioners working with EM victims.
11. Write and publish articles on breaking news in the field for publications and websites focused on health issues.
12. Report the successful legal cases in other countries on behalf of individuals who suffer from EM radiation.
13. Engage scientists globally in awareness campaigns in their homeland.

Vision and Purpose

Wellness is our Natural state, and we have been given plants to heal all our ailments. Radically reducing our EM Radiation exposure is the most urgent and immediate step to clear the chemicals and toxins from our lives. Search various types of healers until you find a modality and practitioner who can help you heal.

Brief Bio

Dr. Jensen's earliest career activities were articles on health, nutrition, and environmental education published by Woman's Day, Teacher, and McGraw Hill magazine. In the mid-70s, she generated quarterly newswire articles (AP & UPI) related to a prominent women's college where she worked in Public Information.

Through the '80s she worked on a doctorate in international communication at the University of Washington, gave birth to three children, and operated a licensed, spiritually-based daycare program while her children were young. With the doctorate in hand, in 1993 she moved to Egypt with her daughters and launched an international career in teaching marketing communication and in consulting for international development agencies.

She instructed directors of civil societies in how to promote their organizations through varied media in the local environments. A noise-abatement campaign she created was adopted in Egypt. She managed a two-year World Bank project to develop a Heart Association in the Czech Republic based on the AHA (1999-2000). Later that decade she co-managed a health promotion program in the UAE (a Johns Hopkins-affiliated institution) instructing medical students in health promotion techniques; some of the projects were adopted by the Abu Dhabi Health Authority.

In 2003, Dr. Jensen launched a website for American women promoting self-care with natural remedies, www.WomensMedicineBowl.com. The website was originally an education/information site on natural healing. Now it heavily focuses on Electro Magnetic Radiation (EMR/Fields) as well as self-care in these early years of the 21st century. For most years since 2006, Dr. Jensen has been a judge of best practices in strategic communication across economic sectors for the Stevie Awards in International Business.
